

Suppressing the Master Page on a Layout Page

This graphic shows a simple Master Page consisting of a border of 2 lines. A layout page (see below) was then created by clicking on the Master Page button.

The Master Page button is a toggle button that flips you back and forth between a layout page and a master page.

With the border appearing on the layout page, pictures were copied to the page.

The example to the right shows the layout page with the Master Page border omitted/suppressed.

To omit the Master Page from any layout page:

- Select the layout page then
- Click on the Omit Master Page button.

The Omit Master Page button is a toggle button that displays or suppresses the Master Page.

Omit Master Page button
